BUILD A BETTER TOMORROW

Loom Crafts

modular prefab homes & cottages

time-effectiveness

80% - 90% of the construction is completed inside a factory, which mitigates the risk of weather delays, allowing projects to be completed in half the time of traditional construction.

flexibility

Flexibility and relocatability of modular components add to the cost-effectiveness over time. Their durable, secure and relocatable characteristics make them ideal for both temporary and permanent applications that will meet the requirements of any industry.

sustainability

The fully controlled fabrication process inside the factory generates less waste, creates fewer site disturbances and allows for tighter construction.

cost-effectiveness

Because construction of modular buildings can occur simultaneously with the site and foundation work, projects are cost-effective than traditional construction.

quality

Loom Crafts utilizes state-of-the-art facilities that integrate best practices in design and workflow. Modular buildings are required to meet the same building codes as traditional construction.

risk reduction

The indoor construction environment reduces the risks of accidents and related liabilities for workers.

Loom Crafts

modular prefab homes & cottages

BUILDING SYSTEMS

LOOM CRAFTS uses the best **dry technologies**, already tested and available on the market, to design modular buildings with **standard components**. The structural components of the floor, wall and roof are totally prefabricated by **Loom Crafts** as we are experts in the processing, with numerically controlled machines, and **assembly of the materials**.

THE BUILDING'S CONFIGURATION

LOOM CRAFTS promotes **modularity** in the construction sector: **buildings** will be no longer designed, but **configured** with **standard components**, that are produced in the factory. The shape, the function and every surface, internal and external, are **customizable**: there are no limits to the imagination!

PRODUCT DISTRIBUTION

Any **prefab component** is delivered directly to the construction site and **installed rapidly**; thanks to an **error-proof joint systems** and mechanical fastenings. It is essential to involve any specialized actor, in order to guarantee **environmentally friendly** products, quick mounting, **design and high quality buildings**.

Loom Crafts

modular prefab homes & cottages

PATENT

We are proud to be the only manufacturer of modular homes & cottages which owns a **PATENT** for this technology.

Our process and methodology has been developed indigenously by us without any technology collaboration with any foreign company.

Sub :- Intimation of the grant and recordal of patent under section 43 of the Act in respect of patent application no. 202111010701

Sir/Madam,

This is to inform you that following the examination of above mentioned patent application under section 12 and 13 of The Patents Act, 1970 and Rules made thereunder (and unaided yielded conditions), I am/We report annuly granted and recorded in the Register of Patents on the 13/10/2021. The Patent Certificate is enclosed herewith.

Patent No. : 379273
Name Of Applicant : LOOM CRAFTS SHADE SYSTEMS PVT. LTD
Date of Filing : 14/03/2021
Date of Grant : 13/10/2021
Title of Invention : A METHOD OF INSTALLING A PREFABRICATED HOUSE
Number of claims : 08

The grant of above mentioned patent and particulars in the Official Journal of the patent office under section 43 of the Act.

The payment of renewal fee is required to be made on this date within three(3) months from the aforesaid date of recording according to the provision to sub-section(4) of section 14 of The Patents Act, 1970, as amended by The Patents (Amendment) Act, 2016.
The Patent Rules, 2003 as amended by The Patents (Amendment) Rules, 2016.

Yours faithfully,
(Officer on behalf of the Controller of Patents)

Note :

1. Every patentee must identify their name for the renewal fee and/or fee for the First Schedule (in case of The Patents (Amendment) Rules - 2016 is available on the official website of Controller of Patents, Designs and Trade Marks at www.ipindia.gov.in
2. No hard copy of Patent Certificates shall be issued separately by the office.

MODERN CONSTRUCTION.
A BRIGHTER TOMORROW.

EXTERIOR WALL CONSTRUCTION (Outside to Inside)

- 1 Natural Thermo Pine Cladding
- 2 Self Adhesive Waterproofing Membrane
- 3 OSB Board (10 mm)
- 4 LGSF with 100 mm Rockwool Insulation (with MEP inside)
- 5 OSB Board (10 mm)
- 6 Gypsum Board (12 mm)
- 7 Final Putty and Paint

GROUND FLOOR CONSTRUCTION (Top to Bottom)

- 1 Wooden Laminate Flooring
- 2 3-4 mm Foam Underlay
- 3 Cement Fiber Board (20 mm)
- 4 Tubular Steel Sections (Chassis)

KEY MATERIALS WE USE

Loom Crafts

modular prefab homes & cottages

Built for Comfort. Designed for a Quieter, Greener Tomorrow.

Our modular structures feature a high-performance **multi-layer wall and roof system**, designed for long-lasting durability, energy efficiency, and sound insulation — ideal for residential, hospitality, and commercial applications.

Thermal INSULATION

U-value
0.29 W/m²·K

Our modular panels offer superior thermal insulation, reducing heat transfer and ensuring comfortable indoor temperatures all year round. A U-value of 0.29 W/m²·K reflects excellent energy efficiency, helping lower heating and cooling costs.

*Better
Spaces
Brighter
Lives*

Acoustic INSULATION

STC Rating
STC 50

Designed to create peaceful interiors, our modular systems achieve an STC rating of 50. This effectively minimizes external noise, enhancing privacy and tranquility in every room.

Loom Crafts

modular prefab homes & cottages

PRECISION | QUALITY | SCALE

OFF-SITE PREFABRICATION

Every layer of the modular panel is designed with the perspective of a mass production: the purpose consists of reducing as more as possible the number of processes carried out on-site, to manage them directly into the factory (off-site). A modern production implies also material trace-ability, high precision, reliable costs and brief delivery times.

FACTORY

BUILT ENVIRONMENT

MODULAR ASSEMBLY

Precision-built modules in a controlled factory environment.

PRECISION MANUFACTURING

CNC technology for high accuracy and consistency.

LAYER BY LAYER

Installation of waterproofing membranes and structural panels.

INTERIOR COMPLETION

MEP and internal linings pre-installed in the factory.

STRONGER STRUCTURE

Robust steel chassis and LGSF components for long-lasting performance.

PREMIUM FINISH

High-quality natural thermo pine cladding for a refined and durable exterior.

Loom Crafts

modular prefab homes & cottages

DISTRIBUTION

01

PACKAGING

The modular panels and the other elements are packed and safely loaded on trucks, in order to assure the maximum performance and protect the quality of the product. The final customer will not receive a pre-mounted module, as it used to imply an oversize load, so the delivery cost would be expensive.

02

DELIVERY AT THE CONSTRUCTION SITE

The dimensions of the modular panels are optimized, so that they can be loaded into a standard truck or container. This means LOOM CRAFTS can ship worldwide its products.

03

SIMPLE ON-SITE MOUNTING

The assembly of the structures is simple, quick and intuitive. Each panel is lifted by a light crane truck, it is positioned correctly, then fastened with screws. Finally, vapor barriers seal the building, so that the structure is completely protected against water and moisture.

STRUCTURAL SAFETY

A 3 dimensional analytical model is prepared for all our cottages in Staad Pro. The load due to self-weight, live load, wind load and earthquake load are applied and sections are checked as per the provisions of IS 801-1975 for strength & serviceability.

DESIGN PARAMETERS:

Material Grade:

Structural section are made of Cold-formed steel members, yield strength 250Mpa which are used for Main frames, floors and walls of cottage confirming to IS 2062 / ASTM A36.

Design Loads:

• Dead Loads:

- Floor: 32.29 Kg/m²
- Interior Walls: 39.88 Kg/m²
- Exterior Walls: 37.66 Kg/m²
- Roof: 35.66 Kg/m²

Live Loads:

- Roof: 50 Kg/m²
- Floor: 200 Kg/m²

Wind Loads:

- Basic Wind Speed: 180 Km/hr
- Design Life of structure: 50 years

Seismic Loads:

- Seismic Zone: IV

Specific applicable codes and standards are identified and adopted in the design philosophies as appropriate to the structural elements. The latest editions of the Codes and standards are used in designs. All design work are based on Indian Standards and Codes with latest revision, with amendments if any, as on date. However, if certain provisions are not available in Indian Standards, International codes and standards are adopted.

CONSTRUCTION SPECIFICATIONS

STRUCTURE

The entire structure is designed as a hybrid system with Light Gauge Steel framing technology imported from Australia, fabricated using advanced CNC-controlled machines, along with mild steel load-bearing sections.

FOUNDATIONS / PLINTH

The client needs to provide the RCC plinth for the structure. Alternatively, a steel plinth over RCC foundations or a pre-cast foundation system is available at an extra cost, with further details provided on Page 56 of the catalogue.

STRUCTURE WRAPPING

The entire steel structure is wrapped with OSB boards on both the exterior and interior. These boards are lightweight yet very strong, waterproof, and termite-resistant.

INSULATION

All external walls and roofs are insulated with 100 mm thick Rock Wool of 48 kg/m³ density, providing effective protection against heat, cold, and sound. The entire external face of the walls and roofs is covered with thermal barriers before the application of waterproofing membranes.

WATER PROOFING MEMBRANES

The entire external surface of the cottage is covered with waterproofing membranes and sealed with aluminium tapes for maximum moisture protection.

INTERNAL WALL & CEILING

All internal walls and ceilings are finished with gypsum boards over the OSB boards and painted in the client's choice of colour. Pine wood cladding on walls or ceilings is also available as per clients choice. Bathroom walls are finished with ceramic tiles from Kajaria.

EXTERNAL WALL & ROOF

The external walls are clad with Natural thermo pine coated with water based, low odour hard-wearing, water weather resistant oil that enhances the colour of cladding.

INTERNAL & EXTERNAL FLOOR

Common areas and bedrooms are finished with wooden laminate flooring from Greenpanel, as per the client's choice. Toilets are fitted with vitrified tiles from Kajaria. External decks, if included in our scope, are constructed with Natural Thermo pine decking.

DOORS & WINDOWS

All internal doors are made of laminated flush doors, while external sliding or fixed doors, windows, and main doors are made from UPVC sections fitted with 8 mm thick toughened glass. Options for double-glazed units (DGU) and mosquito mesh are available at extra cost. Skylights can be incorporated into the roof without extra charge, while skylight blinds are available at an additional cost. Our standard UPVC colour is white or black, although wood-finish UPVC is also available for an extra cost.

SCOPE, COMMERCIAL TERMS & WARRANTY

PLUMBING & TOILET FIXTURES

The toilet in the cottage comes fully equipped with internal pipelines made from CPVC of make Ashirwad and fitted with fixtures from Jaquar, including WC, washbasin, faucets, and other accessories. The client is responsible for connecting the water supply and waste outlets on-site after the cottage erection is completed. Water storage tanks, pressure pumps, and shower glass partitions are not included.

ELECTRICAL FITTINGS

Complete electrical fittings are included, comprising switches, sockets, fans, and LED lights. Internal wiring is from R R Kabel, switches and sockets are from Legrand, LED lights are from Panasonic or similar, and fans are from Atomberg. Electronics such as televisions, refrigerators, air conditioners, and geysers are not included and can be installed separately by the client. We do, however, provide concealed air-conditioning pipelines within the walls as per the layout plans.

DECK RAILINGS

Deck railings are built with Thermo Pine balusters of size 90 x 90 mm, with 10 mm thick toughened glass panels in between, and handrails made from Thermo Pine of size 140 x 26 mm.

FURNITURE

No fixed or loose furniture, soft furnishings, or decorative items are included in the standard scope. Kitchens and wardrobes are available at extra cost, while bathroom vanities are included.

TAXES

GST at 18% is applicable over and above the quoted prices.

TRANSPORTATION

Transportation costs are extra and charged at actuals. Cottages are dispatched flat-packed to optimize freight costs.

INSTALLATION

Installation is included in the cost. However, the client is responsible for arranging boarding and lodging for the installation team and for bearing the rental costs of cranes directly. The client must also ensure proper site access for trucks and cranes, as installation cannot be carried out manually.

PAYMENT TERMS

75% advance, 25% balance before dispatch once order is ready.

COMPLETION TIME

Production time 60-90 days depending on the design. Additional time may be required for transportation and on-site installation.

WARRANTY & LIFE SPAN

Our homes and cottages come with a 20-year warranty covering any structural damages or leakages caused by rainfall. With proper maintenance, the design life span of our homes and cottages can exceed 50 years.

Loom Crafts

modular prefab homes & cottages

WARRANTY TERMS

BUILT FOR A LONGER TOMORROW

20-Year Structural & Rain Leakage Warranty

Loom Crafts Prefab Modular Homes & Cottages offers a 20-year warranty from the date of handover against:

- Structural defects affecting the stability and safety of the building
- Rainwater leakages through roof panels, wall panels, joints, and structural connections
- Defects arising from manufacturing, fabrication, design, or installation carried out by Loom Crafts or its authorized teams

This warranty ensures long-term structural integrity and weather protection under normal usage conditions.

1-Year Free Service Support

In addition to the structural warranty, Loom Crafts provides free service support for 1 year from the date of handover for issues related to:

- Electrical wiring, fittings, and connections
- Plumbing lines, fittings, and minor leakages
- Doors, windows, locks, hinges, and hardware
- Minor installation-related adjustments

Service support includes inspection and rectification of workmanship-related issues. Replacement of consumables or parts, if required, shall be chargeable.

Items Not Covered Under Warranty

The following are excluded from warranty coverage:

- Paint, polish, coatings, sealants, and surface finishes
- Routine wear and tear
- Cleaning, housekeeping, or maintenance activities
- Damage due to misuse, negligence, or lack of regular upkeep
- Modifications, alterations, or repairs carried out by unauthorized personnel
- Damage caused by natural calamities such as earthquakes, floods, cyclones, fire, or external impact
- Civil works including foundations, plinths, flooring, and site works executed by third parties

QUALITY TODAY. PEACE OF MIND ALWAYS.

Warranty Conditions

- Warranty is applicable only to projects executed and installed by Loom Crafts
- Unauthorized repairs or modifications will void the warranty
- Warranty covers manufacturing and installation defects only and does not include aesthetic or maintenance-related concerns
- Regular maintenance and upkeep remain the responsibility of the owner

Warranty Claim Procedure

All warranty or service requests must be raised through official Loom Crafts communication channels along with project details and handover date.

Loom Crafts' technical team will inspect the issue and recommend appropriate corrective action.

General Disclaimer

Loom Crafts' liability under this warranty is limited to repair or rectification of covered defects only.

The company shall not be liable for indirect, incidental, or consequential damages.

Terms & Conditions apply. Warranty governed by applicable laws of India.

WOOD FLOORS FOR A BETTER TOMORROW

LAMINATE FLOORING (MAKE GREEN PANEL)

Greenpanel Laminated Floors consist of four distinct layers: an abrasion-resistance top layer, a decorative design layer, a 100% hardwood HDF core, and a moisture-resistant backing layer. Greenpanel offers a warranty of 10 years on AC3 grade floors that are well suited for residential and low footfall commercial spaces. Greenpanel AC4 grade laminate floors — suitable for offices and malls — come with a warranty of 15 years.

FOUNDATION / PLINTH OPTIONS

A STRONG FOUNDATION FOR A BETTER TOMORROW

We offer multiple foundation / plinth options to suit different site conditions, budgets and project requirements. All options are engineered to provide stability, durability and ease of installation for your modular cottage.

*Built
for Every
Place*

1

Standard Plinth Foundation

SIMPLE. STABLE. COST-EFFECTIVE.

This is the most commonly chosen foundation system, wherein the client is required to construct a plinth as per the design and structural drawings provided by us. Once the plinth is ready, we install the walls of the modular cottage directly over it, followed by the roof. This system offers a stable and cost-effective base and is included in the standard pricing mentioned in the catalogue. It is suitable for sites with a relatively level ground and minimal elevation requirements.

Most Popular
Choice

Cost-Effective

Stable & Reliable

2

Elevated RCC Column Foundation

STRONGER BASE. GREATER FLEXIBILITY.

In this system, the client is required to construct RCC columns as per our specified layout and design. These columns can be raised to a standard height of 2 feet or elevated further up to 8–12 feet above the natural ground level, depending on site conditions or the desire to create a tilted cottage. For this system, we provide a steel floor base and tie beams to integrate the structure with the RCC columns. This option incurs an additional cost of ₹500 per sq. ft. over the ground floor area.

Suitable for
Sloped Sites

2–12 Feet
Elevation

Steel Floor Base
& Tie Beams

3

Pre-Cast Foundation Blocks

QUICKER INSTALLATION. MORE FLEXIBILITY.

This option is ideal for clients seeking a quicker or non-permanent installation method. We supply our proprietary pre-cast foundation blocks, which are placed as per the structural load and layout of the cottage. As with Option 2, a steel floor base is provided along with these pre-cast foundation blocks, adding ₹750 per sq. ft. to the cost. This solution offers flexibility and ease of installation, particularly for uneven terrains or remote locations.

Faster
Installation

Flexible
& Portable

Ideal for
Uneven Terrains
